

REFRESHER

For lacquered wooden floors

Tarkett

Wood

Refresher cleans and protects the varnish on your wooden floors.

Refresher is suitable for both domestic use and for public environments where floors are exposed to severe wear. Refresher contains microscopic varnish pigments that will reinforce varnished surfaces and remove thin scratches.

The treatment re-establishes the original gloss and shine of the floor and gives a completely new appearance. If you so wish you can also apply Refresher on newly installed wooden floors as the product penetrates the joints between the boards and provides a

certain amount of moisture sealing.

The treatment is simple, quick and involves no expensive preparations or cleaning. Simply vacuum or dry mop the floor and then apply Refresher with a mop, pad or the like. Unlike normal polishes, Refresher contains no wax to make the floor slippery and this also means that the treatment can be repeated frequently without building up thick layers. Unlike normal polishes, a floor treated only with Refresher can be varnished again without removing the layer of the floor can also be wet mopped or cleaned with Bioclean between each treatment without dissolving the Refresher.

How often you need to apply Tarkett Refresher depends on the degree of wear and soiling of your floor. Below are some rules of thumb for cleaning intervals with Tarkett Refresher:

Heavy wear	e.g. shops	Once or twice a month
Medium wear	e.g. offices	1-3 times/every three months
Light wear	homes	Once or twice a year

To obtain the best results, apply Refresher when the floor is new.

Warning! If the floor surface is exposed to road salt, the floor must be wet mopped to remove this before applying Refresher.

The salt may otherwise react chemically with the Refresher and form a milky white surface.
